HRS introduces innovative technology for paper industry

Press Trust of India | Mumbai November 20, 2015 Last Updated at 19:32 IST

Pune-based HRS Process Systems Ltd (HRS), part of HRS Group, UK today said it has introduced innovative range of heat exchangers which enables the paper producers save on energy costs with better heat transfer characteristics and low fouling tendency.

At the 12th International Paperex 2015, held at New Delhi recently, the company highlighted the significance of innovative technology in paper industry by showcasing the latest product range including Ecoflux Corrugated Tube Heat Exchangers and HRS Funke Plate Heat Exchangers.

The company is widely recognised for its pioneering role in introducing highly energy efficient products that support sustainable development, a company statement said here.

"Developing better paper and pulp processing methods to efficiently meet the growing demand for paper is a prime challenge before the industry. Our innovative range of heat exchangers enable the producers save on energy costs with better heat transfer characteristics and low fouling tendency. We have solutions for paper and pulp sector in core and ancillary processing," HRS Process Systems Managing Director V Gokuldas said.
